"Evaluation Report"

Attention: To whom it may concern

Dear Sir/Madan,

Diving and Salvage company W. Smit B.V. stationed in the Netherlands contracted Marex Subsea Welds Ltd. to carry out underwater welding tests, these where nesseary to provide a proper WMS.

Welding conducted by carrying out two welding qualification procedures on several steel qualities (base materials) and with different welding positions.

All tests that had been carried out at their local facilities under supervision of ABS class. Underwater welding has been achieved in very good order to the requested high-quality standards.

As well safety, communication and cost-efficient manner how Marex has carried out the work where outstanding for us.

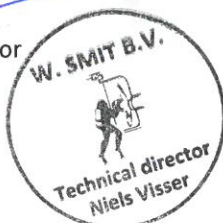

We come to the conclusion that Marex is a highly reliable company for this type of work and will contract them for any other similar works or other underwater works when high standards are required.

Best regards,

Diving & Salvage company W. Smit B.V.

Niels Visser

Technical Director
